Comparative Resume Generation using Multiple LLMs

Joshua Rem E. Balmori

Computer Science 2-A

21st Century IT Skills

Prompt:

None

I want you to create a nextjs one-page portfolio website for me. It will have a sticky header with my name on the left side , and five buttons on the right that basically scrolls down to the page's website: Skills, Projects, Education, About me, and Contact. For the Skills component, I want you to create an array of skills so that I can easily add more to it in the future. The object is made up of these keys: name, experience, and icon. You are free to use any modern icon library. The Projects component will be identical to the skills component where it will have an array of objects which will be the projects itself. Each project object will have a title, description, year, and an image. The image is optional and the component should still function if there's no image inside the object. Next is the education component, again it will be identical to the last two components where it will have an array of objects. The objects will contain the keys school, year, and course. Next is the about me section. Simply put a paragraph there summarizing my experiences, projects, and skills. Lastly is the contact component, it will be the same as the other components where it will have an array storing objects. Each object will have the keys: name, icon, link, and text. If an object doesn't have a link here, then it will simply let the user copy the value of the text key if they press the object's representation on the website. If the object has a link, then it will open a new tab with that link if the user presses that object.

Here are the details that I want you to input into the components:
Name: Joshua Rem E. Balmori
Skills:
{javascript, 2 years}, {typescript, 1 year}, {java, 2 years}, {C#, 1 year}, {Lua, 2 years}, {react, 1 year}, {nextjs, 1 year}
Projects:
{Java Card Game, A card game made with Java's swing library, 2025}, {Fumo website, A nextjs website for plush commissions, 2026}, {Roblox Enemy AI, Made using finite state machines in Lua, 2026}
Education:
{Ateneo de Davao, 2024-2028, Bachelor of Computer Science}, {Harvard, 2023, CS50x}
Contact:
{Discord, jrebalmori}, {Email, jrebalmori@addu.edu.ph}, {Github, https://github.com/JREMbalmo}

Use these colors for the website theme:
FFFCF2, CCC5B9, 403D39, 252422, EB5E28

Replit Output:

Comparison:

Criteria	Replit	Gemini
Structure	Followed every instruction	Didn’t follow the given format
Clarity	Clean	Clean
Formatting	Modern	Somewhat outdated
Overall Quality	Good	Okay

Reflection:

Which LLM performed better and why?

I personally think that Replit performed better compared to Gemini since the way the website was laid out looked modern compared to Gemini's output.

What differences did you observe?

I noticed that Gemini preferred putting the about me section on top instead of following the format I made. While it's common that people put the about section on top of the website, I prefer mine to be somewhere in the bottom after my skills, projects, and education are shown as I consider those as more important.

What improvements did you make in your final resume?

Mostly just fixing the bugs with the contact component where the functionalities didn't work as pressing them won't copy the values if ever there was no link.

What did you learn about prompting?

Final Resume:
